Networks and Technologies for Telecommunications (RTT) – 9 CFU

- Teacher(s):
  - Luca Valcarenghi, valcarenghi@santannapisa.it , tel. 050-5492138
    - https://www.santannapisa.it/it/luca-valcarenghi
  - Alessio Giorgetti, a.giorgetti@santannapisa.it , tel. 050-5492168
    - https://www.santannapisa.it/it/alessio-giorgetti
  - Barbara Martini, barbara.martini@cnit.it, tel. 050-5492245
    - https://www.santannapisa.it/it/barbara-martini
- Semester: 2
- Pre-requisites: Network management and Configuration (GCR)
- Area: Engineering, Group A (9 CFU)

Syllabus
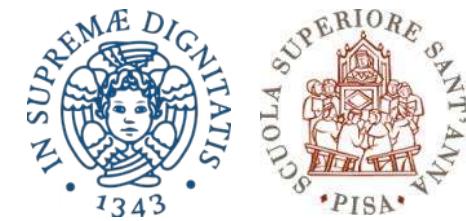

- **Network Management and Services (30 hours) – B. Martini**
  - What is Network Management and how it works in IP and transport networks
  - Management protocols (i.e., SNMP, NETCONF, CMIP)
  - Data modeling and data syntax languages (i.e., SMI, GDMO)
  - Exam: quiz

- **Lab of Network Software (25 hours) – A. Giorgetti**
  - Introduction to Software Defined Networking and OpenFlow protocol
  - Practical deployment of an SDN network emulated environment
  - Development (Java) of SDN application using ONOS controller, https://onosproject.org/
  - Exam: quiz and project

- **FPGAs for Communications Networks Prototyping (20 hours) - L. Valcarenghi**
  - What is an FPGA and what can be used for in communications networks
  - FPGA design: schematic-based flow, HDL-based flow, modular and incremental
  - Design Tools: simulation, synthesis, verification
  - Exam: project

Theses available

- Advanced management solutions for Cloud Data Centers (SDN, NFV)
- Service composition and orchestration in 5G networks

- Transport Networks for 5G Mobile Radio System
- Energy efficiency in access networks
- Implementation of scheduler and switch controller with Field Programmable Gated Array (FPGA)

- ONOS application and driver development for optical networks
- Communication among ONOS controllers hierarchy
- Control of P4 networks using ONOS
